

More Libraries required (*Important)

In addition to the Yahoo_fin library, you need to install the requests_html library.

Code to be typed into your prompt or terminal:

```
pip install requests_html
```

Yahoo_fin Installation

Code to be typed into your prompt or terminal:

```
pip install yahoo_fin
```

If you ever need to upgrade the code package in the future, run:

```
pip install yahoo_fin --upgrade
```

Pip vs Conda

Notice that we used pip to install the yahoo_fin library instead of conda.

Conda and pip are code package installers. Both serve similar functions.

In this case, the creator of yahoo_fin only made his code package available via pip.

Extra info

Yahoo_fin requires a few other libraries to work:

- ftplib
- io
- pandas

- requests

Fortunately, these come pre-installed with Anaconda.
